

Plastic and Cosmetic Surgery

Plastic and Cosmetic Surgery

Plastic and cosmetic surgery accounts for a large portion of the procedures done at TopSurgeons. Patients coming to TopSurgeons will find surgeons using the latest minimally invasive and well priced surgical techniques. The procedures include breast augmentation, tummy tuck, liposuction, facelift and rhinoplasty.

Breast augmentation is one of the more popular procedures, with TopSurgeons offering outstanding service and pricing for this surgery. Patients will have access to a variety of selections in breast implants. Those choices can include saline implants and silicone implants. Generally the best candidates for this procedure are healthy adult women who are looking for a change in the size and shape of their breasts. Done in a safe and effective manner, the procedure is done through one of four methods – periareolar (around the nipple area), inframammary (below the breast), axillary (in a skin crease beneath the arm) and transumbilical (within the belly button).
